Warmoesstraat 35 Amsterdam.

Typ. J. VAN BOEKHOVEN, Utrecht.

INHOUD.

	Bladz.
Lijst van waarnemingsstations in Nederland	v
Voorrede	VII—VIII
Waarnemingen in Nederland in 1898, bevattende:	
Afdeeling I. Waarnemingen driemaal daags gedaan te de Bilt, Groningen, Helder, Vlissingen, Maastricht, Hellevoetsluis, Tilburg en Winterswijk	1—96
Afdeeling II. Maandoverzichten der driemaaldaagsche waarnemingen te de Bilt, Helder, Leeuwarden, Groningen, Assen, Amsterdam, Oude-Wetering, Katwijk, Rotterdam, Hellevoetsluis, Vlissingen, Oudenbosch, Tilburg, Maastricht, Zutphen en Winterswijk	97—112
Afdeeling III. Waarnemingen omtrent regenhoeveelheden voor ± 100 stations	113—160
Afdeeling IV. Afwijkingen van den thermometer te Groningen, Leeuwarden, Helder, Utrecht, Hellevoetsluis, Vlissingen, Maastricht, Assen en Tilburg en van den barometer te Delfzijl, Groningen, Leeuwarden, Helder, Assen, Amsterdam, Utrecht, Hellevoetsluis, Tilburg, Vlissingen en Maastricht	161—208
Afdeeling V. Uurwaarnemingen van den thermometer gedaan te Utrecht, Helder en Vlissingen en van den barometer gedaan te Helder, Groningen en Vlissingen, benevens overzichten dezer waarnemingen	209—283
Afdeeling VI. Bijzondere waarnemingen.	
A. Composanten van den wind te Utrecht	285—296
B. Wind voor 4 plaatsen in Nederland, (Groningen, Helder, Utrecht en Vlissingen)	297—299

TABLE DES MATIÈRES.

	Page.
Liste des stations météorologiques des Pays-Bas	V
Préface	VII—VIII
Observations faites dans les Pays-Bas en 1898, contenant:	
Division I. Observations faites trois fois par jour à de Bilt, Groningue, Helder, Flessingue, Maestricht, Hellevoetsluis, Tilbourg et Winterswijk	1—96
Division II. Revues mensuelles des observations faites trois fois par jour à de Bilt, Helder, Leeuwarde, Groningue, Assen, Amsterdam, Oude-Wetering, Katwijk, Rotterdam, Hellevoetsluis, Flessingue, Oudenbosch, Tilbourg, Maestricht, Zutphen et Winterswijk	97—112
Division III. Observations pluviométriques dans ± 100 stations	113—160
Division IV. Écarts du thermomètre à Groningue, Leeuwarde, Helder, Utrecht, Hellevoetsluis, Flessingue, Maestricht, Assen et Tilbourg et du baromètre à Delfzijl, Groningue, Leeuwarde, Helder, Assen, Amsterdam, Utrecht, Hellevoetsluis, Tilbourg, Flessingue et Maestricht.	161—208
Division V. Observations horaires du thermomètre, faites à Utrecht, Helder et Flessingue et du baromètre, faites à Helder, Groningue et Flessingue et résumés de ces observations	209—283
Division VI. Observations particulières.	
A. Composantes du vent à Utrecht	285—296
B. Vent … 4 [illegible] Utrecht et Flessingue).	297

	Bladz.
C. Overzicht van de weêrsgesteldheid gedurende het jaar 1898	300—314
D. Verschijnselen uit het planten- en dierenrijk en betreffende den landbouw	315—319
E. Jaaroverzicht 1898 en tienjarig overzicht 1889—98	320—359
Afdeeling VII. Aardmagnetische waarnemingen te Utrecht	361—390
Aanhangsel. Waarnemingen buiten Nederland in 1898, bevattende:	
Waarnemingen gedaan te *Burnside*, Coronie, Kolonie Suriname (Zuid-Amerika), te *Paramaribo*, (Kolonie Suriname), te *Groningen*, (Kolonie Suriname)	I—XXIV
Lijst van ingekomen boekwerken en tijdschriften in 1898.	XXV—XXXI

	Page.
C. Revue du temps pendant l'année 1898.	300—314
D. Phénomènes périodiques des animaux, des végétaux et de l'agriculture.	315—319
E. Résumé 1898 et résumé 1889—98	320—359
Division VII. Observations du magnétisme terrestre à Utrecht. . . .	361—390
Appendice. Observations faites à l'étranger en 1898, contenant:	
Observations faites à *Burnside*, Coronie, colonie du Surinam (Amérique du Sud), à *Paramaribo*, (colonie du Surinam), à *Groningue*, (colonie du Surinam)	I—XXIV
Liste des livres et ouvrages périodiques reçus en 1898	XXV—XXXI

VOORREDE.

Bij het verschijnen van het 50ste deel van dit Jaarboek dient slechts vermeld, dat de inrichting geheel dezelfde gebleven is, als die van den vorigen jaargang.

Van *Suriname* komen waarnemingen voor uit *Burnside*, *Paramaribo* en *Groningen*.

Overigens raadplege men omtrent de inrichting van het Jaarboek hetgeen daaromtrent in de Inleiding van den 45sten Jaargang gezegd is.

Evenals de laatste jaren volgt hier een tabel met opgave der temperatuur-waarnemingen te 8 uren 's morgens op het NW-plat gedaan, vergeleken met die op hetzelfde uur, met het instrument, dat van oudsher voor de waarnemingen gediend heeft. Omtrent de ver-

PREFACE.

Ce 50e volume de l'Annuaire est, quant à son plan et sa distrib[illegible] indentique au précédent.

Notre Colonie du *Surinam* y est représentée par les obse[illegible] de *Burnside*, *Paramaribo* et *Groningue*.

Quant à l'arrangement de l'Annuaire on pourra consulter [illegible] à été dit dans l'Introduction du 45e volume.

Ainsi que les derniers années, nous donnons ci-dessous une [illegible] des observations de température, faites à 8 heures du matin, [illegible] terrasse nord-ouest, comparées avec celles qui ont été faites à [illegible] heure, avec le thermomètre dont on s'est servi dep[illegible] de[illegible]

der tabel en de beweegredenen tot het doen der waarnemingen en de Voorrede van den 42sten Jaargang.

DE BILT, Februari 1901.

MAURITS SNELLEN.

...ées pour ces observations. Pour l'expo[illegible] raisons qui nous ont porté à faire ces observations, nous renvoyons à la préface de la 42e année de l'Annuaire.

DE BILT, Février 1901.

MAURICE SNELLEN.

Na de stormachtige dagen, waarmede het vorige jaar eindigde, trad het nieuwe met stil bedekt en warm weer in. Het gebied van hooge luchtdrukking over Rusland breidde zich gedurende de volgende dagen over Midden-Europa uit en hield daar, afgezien van eenige onbelangrijke verplaatsingen, stand. Daar het steeds ten Zuiden van ons land bleef en een reeks van depressies hoog Noordelijk voorbij trokken, was de wind overwegend Zuidwestelijk en het weer doorgaans warm, bedekt, en 's morgens mistig. In overeenstemming hiermede zijn de gemiddelde barometerstand, bewolking en temperatuur voor deze maand buitengewoon hoog.

Après les trois jours de tempête qui terminèrent l'année 1897, la nouvelle année commença par un temps couvert, calme et chaud. L'aire de hautes pressions au-dessus de la Russie s'étendit les jours suivants sur l'Europe Centrale, et s'y maintint, sauf quelques déplacements de peu d'importance. Comme elle resta toujours au sud de notre pays, et qu'une série de dépressions passèrent tout au nord, le vent souffla généralement du sud-ouest, et le temps fut ordinairement chaud, couvert, et accompagné de brouillard le matin. Aussi la moyenne de la pression atmosphérique, de la nébulosité et de la température, est-elle extrêmement haute pour ce mois.

Den 6den veroorzaakte een depressie bij Schotland krachtigen ZW.-wind en regenweer; den 8sten daarentegen was het helder vriezend weer. Ook den 17den en 18den vroor het, maar bij bedekten hemel. Den 19den, terwijl over Scandinavië stormweer heerschte, wakkerde de ZW.-wind hier alleen maar aan. Het weer bleef verder bedekt en warm, tot den 29sten, terwijl de barometer bij de 780 mM. aanwees, een depressie over Noord-Scandinavië haar invloed zeer snel Zuidwaarts uitbreidde, en reeds 's avonds stormachtigen ZW.-wind over onze streken veroorzaakte. Den 30sten stormde het over geheel Noord-Europa uit het Westen, den 31sten uit het N.-Westen, terwijl tamelijk veel regen viel. Daarna nam de wind in kracht af, en klaarde het weer op.

Den 3den werden een krans en kring om maan en zon waargenomen.

Le 6, une dépression qui se trouvait près de l'Ecosse amena un vent fort du sud-ouest et de la pluie; le 8, au contraire, le ciel fut clair et il gela. Le 17 et le 18, il gela aussi, mais par un temps couvert. Le 19, bien qu'une tempête régnât en Scandinavie, le vent du sud-ouest ne fit que fraîchir dans notre pays. Le temps resta ensuite couvert et chaud jusqu'au 29, où le baromètre marquait près de 780 mm., et qu'une dépression sur le nord de la Scandinavie, qui s'étendit rapidement vers le sud, amena déjà le soir, dans nos contrées, un vent tempétueux du sud-ouest. Dans toute l'Europe septentrionale, il y eut, le 30, une tempête de l'ouest, et, le 31, du nord-ouest, tandis qu'il tomba assez de pluie. La force du vent diminua ensuite, et le temps s'éclaircit.

Le 3, on observa une couronne et un halo autour du soleil et de la lune.

De maand treedt, onder den invloed van een stormcentrum aan de Noordsche kust, in met regenweer bij ZW.-wind, die den volgenden dag bij 't verschijnen van een nieuw stormcentrum aanwakkert tot een van ZW. tot NW. ruimenden storm. Terwijl de depressie zich naar Denemarken voortbeweegt, trekken sneeuw- en hagelbuien over ons land en eerst den 6den loopt de wind, onder den invloed van een nieuwe depressie bij Schotland, naar het ZW. terug; een uitlooper trekt dien dag met een sneeuwstorm over ons land. Van den 8sten tot den 9den trekt een ondiepe depressie, van regenval begeleid, benoorden ons land naar Midden-Duitschland. Daarna ontwikkelt zich een gebied van hooge luchtdrukking over onze streken en blijft het weer tot den 13den bij matigen ZW.-wind betrokken en warm. Een secundaire depressie trekt dien dag met grooten regenval over ons land. Den 15den verschijnt een nieuwe depressie bij Schotland, die den 16den stormachtigen ZW.-wind over ons land veroorzaakt.

De wind ruimt daarna, terwijl deze depressie zich Oostwaarts verder beweegt.

Den 20sten veroorzaakt een diepe depressie benoorden Schotland krachtigen ZW.-wind en regenweer; een uitlooper trekt met regen- en hagelbuien over ons land. Daarna vertoonen zich twee depressies, één over de Noordzee en één bij Ierland, die over 't Kanaal naar Frankrijk trekt en waarbij 't weer ten onzent stil en rustig is.

Den 24sten vertoont zich een depressie over Midden-Duitschland en is het weer bij N.-wind buiïg; den volgenden dag valt er overvloedig regen en ook sneeuw. Na een korte opklaring loopt de wind weer, onder den invloed van een depressie bij Schotland, bij regen en sneeuwval naar het ZW. Ook den 27sten is het weer regenachtig, maar klaart den laatsten van de maand op.

Sous l'influence d'un centre de tempête sur les côtes de la Norvège, le mois commence par la pluie et un vent du sud-ouest; le lendemain, sous l'influence d'un nouveau centre de tempête, ce vent tourne en une tempête, qui va du sud-ouest au nord-ouest. Tandis que la dépression se meut vers le Danemark, des giboulées de neige et de grêle passent sur notre pays, et ce n'est que le 6, que, sous l'influence d'une nouvelle dépression près de l'Ecosse, le vent revient au sud-ouest; ce même jour, un bras de cette dépression passe sur notre pays, et amène une tempête de neige. Du 8 au 9, une petite dépression, accompagnée de pluie, passe au nord de notre pays vers l'Allemagne Centrale. Puis, une aire de hautes pressions s'étend sur nos contrées, et, jusqu'au 13, le temps reste couvert et chaud, par un vent du sud-ouest. Ce jour-là, une dépression secondaire, accompagnée d'une grande chute de pluie passe sur notre pays. Le 15, une nouvelle dépression près de l'Ecosse amène chez nous, le 16, une tempête du sud-ouest

Le vent diminue ensuite, tandis que cette dépression se dirige vers l'est.

Le 20, une profonde dépression au nord de l'Ecosse amène un vent fort du sud-ouest et un temps pluvieux; un bras de cette dépression passe sur notre pays, accompagnée d'averses de pluie et de grêle. Puis se présentent deux dépressions, l'une sur la mer du Nord, l'autre près de l'Irlande, se dirigeant vers la France en passant par dessus la Manche, et pendant lesquelles le temps resta parfaitement calme chez nous.

Le 24, une dépression se présente sur l'Allemagne Centrale, et le temps est aux giboulées par un vent du nord; le jour suivant, il tombe beaucoup de pluie et aussi de la neige. Après une courte éclaircie, le vent, sous l'influence d'une dépression près de l'Ecosse, tourne de nouveau au sud-ouest, accompagné de pluie et de neige. Le 27, le temps est aussi pluvieux, mais il s'éclaircit le dernier du mois.

De maand treedt onder den invloed van een depressie, die zich van Schotland naar Denemarken voortbeweegt, in met regenachtig weer bij ZW.-wind. De wind ruimt den 2den bij buïg weer tot NW.; den 3den bij opklarend weer tot N.-wind. Daarna wordt de wind, onder den invloed van een depressie-gebied over Zuid-Europa Oostelijk. Den 8sten waait er een stormachtige en koude NO.-wind en ook de volgende dagen blijft de wind NO. en het weer betrokken en koud. Eerst den 15den krijgt 't depressie-gebied bij Schotland weer de overhand en wordt de wind ZW. en het weer mistig en regenachtig, terwijl de temperatuur rijst. Den 18den en 19den trekt een depressie over Scandinavië, die regenachtig weer bij ruimenden Westelijken wind veroorzaakt; daarna wordt het weer onder den invloed van een gebied van hooge luchtdrukking over Engeland stil en helder. Een depressie ontwikkelt zich den 23sten over Zuid-Zweden en de Noordzee, waardoor de wind ZW. wordt en de hemel weer betrekt. Deze depressie trekt op ongewone wijze Zuidwaarts naar Midden-Duitschland en Frankrijk, waardoor de

Sous l'influence d'une dépression qui se dirige de l'Ecosse vers le Danemark, le mois commence par un temps pluvieux et un vent du sud-ouest. Le vent tourne, le 2, au nord-ouest, avec des giboulées, et, le 3, au nord, par un temps qui s'éclaircit. Ensuite le vent devient est, sous l'influence d'une dépression au-dessus de l'Europe méridionale. Le 8, il souffle un vent froid et tempétueux du nord-est; les jours suivants aussi, le vent reste au nord-est; le temps est couvert et froid. Le 15 seulement, l'aire de basses pressions près de l'Ecosse reprend le dessus, le vent devient sud-ouest, le temps brumeux et pluvieux, tandis que la température monte. Le 18 et le 19, une dépression passe sur la Scandinavie; elle amène un temps pluvieux, avec un vent d'ouest qui s'affaiblit peu à peu; puis, sous l'influence d'une aire de hautes pressions au-dessus de l'Angleterre, le temps devient calme et clair. Une dépression se forme le 23 sur la Suède méridionale et la mer du Nord; le vent souffle alors du sud-ouest, et le temps se couvre de nouveau. Cette dépression se dirige d'une manière peu ordinaire au

wind door het N. naar 't NO. loopt en het weer koud en buiïg wordt. Een algemeene, stormachtige N.-Oostelijke luchtstrooming ontstaat over West-Europa; op de meeste plaatsen valt sneeuw. Hoewel de depressie over België blijft hangen, gaat de NO.-wind den 23sten liggen en blijft het weer betrokken en mistig. Den 30sten vertoonen zich depressies over de Noordzee en 't Kanaal, die respectievelijk naar Noord-Duitschland en Frankrijk trekken, en waarbij 't weer ten onzent stil en betrokken blijft.

De maand treedt in bij geringe bewolking en Oostelijken wind, onder den invloed van een gebied van hooge luchtdrukking over Engeland. Daarna wordt de wind Westelijk en het weer warmer; den 4den veroorzaakt een depressie over Zuid-Noorwegen buiïg weer. Een gebied van hooge luchtdrukking, dat zich in de volgende dagen van Engeland naar Frankrijk voortbeweegt, is vergezeld van helder weer in onze

sud, vers l'Allemagne Centrale et la France, ce qui fit tourner le vent au nord-est, par le nord, et rendit le temps froid et orageux. Un courant général de tempête du nord-est se déclare sur l'Europe occidentale; il tombe presque partout de la neige. Quoique la dépression se maintienne sur la Belgique, le vent du nord-est tombe le 23 et le temps reste couvert et brumeux. Le 30, des dépressions se présentent sur la mer du Nord et sur la Manche, qui se dirigent respectivement vers l'Allemagne du Nord et la France, et pendant lesquelles le temps chez nous resta calme et couvert.

Onder den invloed van een depressie, die N.-waarts langs Groot-Brittannië trok, begon de maand met buïig weder, — veelal vergezeld van onweders, — terwijl de temperatuur steeg, en deze op 2 Mei haar maximum bereikte. Toen op 5 Mei een depressie over het Zuiden van Engeland en de Noordzee naar het Oosten van Nederland trok, werd het weder bij Noordelijken wind koud en schraal, maar klaarde op 8 Mei een weinig op. Na 10 Mei werd het weder beheerscht door een depressie boven Scandinavië, waarvan buïig, koud weder met N.Westelijken wind het gevolg was, die echter tengevolge eener andere depressie boven de Noordzee op 11 Mei in een krachtigen ZW.-wind overging.

Terwijl deze depressie den volgenden dag N.-waarts trok, ruimde de wind.

De luchtdrukking was na 15 Mei gelijkmatig over Europa verdeeld, zoodat de wind zwak en zeer afwisselend van richting was. Oostelijke wind kwam betrekkelijk veel voor en het weder was de laatste helft der maand bijna voortdurend somber en schraal. Op 20 en 21 Mei trokken nog onweders over Nederland.

Sous l'influence d'une dépression qui se dirigeait vers le nord, le long de la Grande-Bretagne, le mois commença par un temps orageux, souvent accompagné d'éclairs, tandis que la température monte et atteint le 2 Mai son maximum. Le 5 Mai, lorsqu'une dépression sur le sud de l'Angleterre et de la mer du Nord se dirigeait vers l'est des Pays-Bas, le temps devint âpre et froid, avec un vent du nord, mais s'éclaircit un peu le 8. Après le 10 Mai, le temps est sous l'influence d'une dépression au-dessus de la Scandinavie, dont le résultat fut un temps orageux et froid, par un vent du nord-ouest, qui, par suite d'une autre dépression sur la mer du Nord, le 11 Mai, fit place à un vent fort du sud-ouest.

Le vent tomba le lendemain, lorsque cette dépression se dirigea vers le nord.

La pression atmosphérique était très régulièrement répartie sur l'Europe après le 15 Mai, de sorte que le vent fut faible et de directions très diverses. Le vent d'est se présenta relativement assez souvent, et dans la dernière partie du mois, le temps fut presque continuellement sombre et rude. Le 20 et le 21 Mai, des orages passèrent sur les Pays-Bas.

Tengevolge van een depressie ten Westen van Denemarken, begon de maand met koud buiïg weder, hetwelk tot 4 Juni bleef aanhouden, toen de verdeeling der luchtdrukking over Europa meer gelijkmatig was geworden. De temperatuur steeg belangrijk en op die dagen waren verschillende warmte-onweders hiervan het gevolg. De wind was na 10 Juni hoofdzakelijk N.-Oostelijk, waardoor het weder toen, wel is waar droog, maar koud en veelal somber was. De depressie, die op 20 Juni ten Westen van Schotland verscheen, maakte aan dezen toestand een einde, en, terwijl zij zich al meer en meer naar Midden-Europa uitbreidde, werd het weder hier te lande op 24 Juni weder buiïg, wat tot het einde der maand voortduurde. Alleen op 27 Juni was het vrij goed weder.

A la suite d'une dépression à l'ouest du Danemark, le mois commença par un temps orageux et froid, qui se maintint jusqu'au 4 Juin, où la pression atmosphérique sur l'Europe était plus régulièrement répartie. La température monta considérablement, et il en résulta, dans ces jours-là, plusieurs orages de chaleur. Après le 10 Juin, le vent souffla surtout du nord-est, ce qui fit que le temps fut sec, il est vrai, mais froid et ordinairement sombre. La dépression qui se présenta le 20 à l'ouest de l'Ecosse, mit fin à cet état des choses, et, en s'étendant de plus en plus sur l'Europe Centrale, elle rendit de nouveau le temps orageux, le 24 Juin; ce qui dura jusqu'à la fin du mois, sauf le 27 Juin, où le temps fut assez beau.

Gemiddeld stijgt op 5,8 dagen in Juli de temperatuur boven 25° C.; dit jaar is deze stand zelfs geen enkelen dag bereikt. Tengevolge van het veelvuldig voorkomen van Noordelijken wind bij bewolkten hemel, heeft de afgeloopen Julimaand met haar guur, somber weder, geen aangename herinnering achtergelaten. Onweders, anders zoo talrijk in deze maand, kwamen slechts op 4, 22, 28 en 29 Juli voor en zelfs deze waren weinig belangrijke onweersdagen.

In het begin der maand was het weder onder den invloed van een gebied van hooge drukking, waarvan het maximum Zuidwestelijk van Ierland lag, totdat op den avond van 17 Juli ten NW. van Schotland een depressie verscheen, die met betrekkelijk groote snelheid over de Noordzee naar het Zuiden van Zweden trok; Noordenwind was hiervan weder het gevolg. Het gebied van hooge drukking breidde zich daarna

En moyenne, le mois de Juillet donne 5,8 jours où la température s'élève au-dessus de 25°; cette année, ce chiffre ne fut pas atteint un seul jour. La fréquence du vent du nord par un ciel couvert est cause que ce mois de Juillet, avec son temps rude et couvert, n'a pas laissé un souvenir agréable. Les orages, autrement si fréquents dans ce mois, ne se sont présentés que le 4, le 22, le 28 et le 29, et furent même de peu d'importance.

Au commencement du mois, le temps fut sous l'influence d'une aire de hautes pressions, dont le maximum se trouvait au sud-ouest de l'Irlande, jusqu'à ce que, le 17 Juillet, une dépression se présenta au nord-ouest de l'Ecosse qui, avec une assez grande vitesse, se dirigea par dessus la Manche, vers le sud de la Suède; il en résulta naturellement de nouveau un vent du nord. L'aire de hautes pressions s'étendit

weder uit, waarbij op 21 Juli het maximum boven Nederland kwam te liggen, aan welken toestand een depressie, die zich op den middag van 22 Juli boven Ierland bevond, een einde maakte. Ook deze trok met groote snelheid naar het Zuiden van Zweden. Na 25 Juli was de luchtdrukking zeer gelijkmatig over Europa verdeeld en dientengevolge de wind zeer zwak, alleen op 30 Juli was de gradient boven Nederland vrij belangrijk, waardoor hier te lande een krachtige N.-wind woei. Op 31 Juli strekte zich weder het gebied van hooge drukking over Midden-Europa uit.

ensuite de nouveau, de sorte que son maximum se trouvait le 21 Juillet au-dessus des Pays-Bas. Une dépression, qui se trouvait l'après-midi du 22 Juillet au-dessus de l'Irlande, mit fin à cet état. Cette dépression se dirigea aussi avec une grande vitesse vers la Suède. Après le 25, la pression atmosphérique était très régulièrement répartie sur l'Europe, de sorte que le vent fut faible. Le 30 Juillet seulement, le gradient au-dessus des Pays-Bas fut assez considérable, et amena chez nous un fort vent du nord. Le 31 Juillet, l'aire de hautes pressions s'étendait de nouveau sur l'Europe Centrale.

De eerste dagen der maand bleef het weder nog onder den invloed van het gebied van hooge drukking, dat boven Midden-Europa zetelde, totdat op 5 Augustus een depressie, die ten Westen van Schotland verscheen, zich deed gelden en, over de Noordzee en het Zuiden van Noorwegen naar Denemarken gaande, hier te lande regenachtig weder en bewolkten hemel veroorzaakte. Dit sombere weder hield tot 11 Augustus aan, op welken dag zich weder een gebied van hooge drukking boven Midden-Europa ontwikkeld had. De temperatuur steeg in het nu volgende tijdperk belangrijk en het maximum overschreed op 10 dagen de temperatuur van 25° C.

In jaren is de temperatuur in Augustus zoo hoog niet gestegen als dit jaar; het maximum is toch maar weinig minder dan de hoogst bekende temperatuur in deze maand, namelijk 34°.4 C. in 1857.

Na 22 Augustus werd de verdeeling der luchtdrukking over Europa zeer onregelmatig, waarvan buïg weder, veelal van onweder vergezeld, het gevolg was. Het weder werd een paar dagen later, toen de verdeeling regelmatiger was geworden, iets beter, maar op 29 Augustus wees de richting van den wind aan de Westkust van Ierland reeds op de nadering van een depressie boven den Atlantischen Oceaan, die dan ook in den morgen van 30 Augustus ten Noorden van Schotland werd aangetroffen. Gelukkig trok zij met betrekkelijk groote snelheid over de Noordzee naar het Skagerrak, zoodat op 31 Augustus het weder omstreeks den middag opklaarde en de wind ging liggen.

Dans les premiers jours du mois, le temps resta sous l'influence de l'aire de hautes pressions qui se trouvait sur l'Europe Centrale, jusqu'à l'apparition, le 5 Août, d'une dépression à l'ouest de l'Ecosse, qui, en passant par dessus la mer du Nord et le sud de la Norvège vers le Danemark, amena dans notre pays un temps pluvieux et un ciel couvert. Ce temps sombre se maintint jusqu'au 11 Août, où il s'était de nouveau formé une aire de hautes pressions sur l'Europe Centrale. La température monta considérablement dans la période suivante, et dans 10 jours, le maximum dépassa 25°.

Depuis nombre d'années, la température n'avait pas été si haute dans le mois d'Août; le maximum n'a été que de peu inférieur à la plus haute température connue dans ce mois, c'est-à-dire 34°.4 en 1857.

Après le 22 Août, la répartition de la pression atmosphérique sur l'Europe devint très irrégulière; il en résulta des bourrasques, souvent accompagnées d'orage. Une couple de jours plus tard, le temps devint un peu meilleur, lorsque la répartition fut devenue plus régulière; mais le 29 Août, la direction du vent sur la côte ouest de l'Irlande, indiquait déjà l'approche d'une dépression sur l'océan Atlantique, qui se présenta dans la matinée du 30 Août au nord de l'Ecosse. Elle s'éloigna heureusement avec une assez grande rapidité par dessus la mer du Nord vers le Skagerrak, de sorte que, le 31, vers midi, le temps s'éclaircit et le vent tomba.

SEPTEMBER.

	Normaal voor de maand.	Waargenomen in deze maand.

De afgeloopen Septembermaand onderscheidde zich door buitengewoon schoon weder; in de maand kwam geen enkele bewolkte dag voor en regen was een zeldzaamheid. Op 7 dagen steeg de thermometer boven de 25° C. en het maximum is hooger dan de hoogste temperatuur, die tot nu toe in September is waargenomen, namelijk 29.°5 C. in 1886. Slechts op 12 September, toen een depressie boven Scandinavië haar invloed deed gelden, werd het fraaie weder voor één dag onderbroken en van 22—25 September was het weder schraal tengevolge van den Noordelijken wind, die door een depressie in de buurt van de Zuidelijke Oostzee veroorzaakt werd. Op 18 September onweerde het na den middag bijna boven geheel Nederland en in den avond van 9 September werd op tal van plaatsen een zeer krachtig poollicht, dat met sterke magnetische storingen gepaard ging, waargenomen.

Le temps a été superbe dans ce mois de Septembre; il n'y eut pas un seul jour couvert, et la pluie fut rare. Dans 7 jours, le thermomètre s'éleva au-dessus de 25°, et le maximum est plus élevé que la plus haute température qu'on ait observée jusqu'ici en Septembre, c'est-à-dire 29.°5, en 1886. Le 12 Septembre seulement, lorsqu'une dépression au-dessus de la Scandinavie faisait sentir son influence, le beau temps fut interrompu pendant un jour, et, du 22 au 25 Septembre, le temps fut rendu froid par le vent du nord, amené par une dépression vers le sud de la Baltique. Le 18, il y eut un orage, qui s'étendait sur presque tous les Pays-Bas, et, dans la soirée du 9 Septembre, on observa en nombre d'endroits une très forte aurore boréale, accompagnée de grandes perturbations magnétiques.

Het schoone weder der Septembermaand duurde nog tot in het begin van October voort, toen een gebied van hooge drukking boven Europa zetelde. Allengs werd het weder somberder, de mist duurde langer op den dag en losste zich dan 's avonds in regen op. Over het algemeen was de wind zwak. 12 October verscheen ten Westen van Ierland een diepe depressie, die zich wel over Europa uitbreidde, maar zich weinig verplaatste, totdat zij op 19 October boven Engeland verdween. Een secundaire depressie veroorzaakte op 30 October een stormachtigen Z.-Westelijken wind. Zoodra deze verdwenen was, klaarde het weder op, zoodat de maand weder met fraai weder geëindigd is.

OCTOBRE.

Le beau temps de Septembre continua dans les premiers jours d'Octobre, lorsqu'une aire de hautes pressions se trouvait au-dessus de l'Europe. Peu à peu le temps devint plus sombre, le brouillard se maintenait plus tard dans la journée, pour se résoudre en pluie dans la soirée. Le vent fut généralement faible. Le 12 Octobre, une profonde dépression apparut à l'ouest de l'Irlande; dépression qui s'étendit, il est vrai, sur l'Europe, mais qui se déplaça fort peu, jusqu'à ce qu'elle disparut, le 19 Octobre, au-dessus de l'Angleterre. Une dépression secondaire produisit, le 30 Octobre, un vent tempétueux du sud-ouest. Aussitôt que cette dépression eut disparu, le temps s'éclaircit; de sorte que le mois finit aussi par le beau temps.

Een diepe depressie, die ten Noorden van Schotland naderde, maakte op 2 November een einde aan het fraaie weder en veroorzaakte een storm uit het WZW. Toen deze depressie Noordwaarts afgetrokken was, bleef het weder eenige dagen vrij goed, alleen 's morgens was het mistig. Een gebied van hooge drukking zetelde in dien tijd boven Midden-Europa. Op 22 November woei tengevolge eener depressie, die ten Oosten langs Nederland trok, een krachtige N.-Oostelijke wind, waarna een onregelmatige verdeeling der luchtdrukking over Europa ontstond, bij welke op 23 November een depressie boven Ierland het weder in Nederland beheerschte. Deze trok Westwaarts en hield tot 26 November bij den ingang van het Kanaal stand, op welken datum zij langs de kust naar Denemarken trok. Zij werd nog door een tweede depressie gevolgd, zoodat de laatste dagen der maand somber en buiïg waren. Op 30 November was het weder vrij goed.

Une profonde dépression qui s'approchait au nord de l'Ecosse, mit fin, le 2 Novembre, au beau temps, et amena une tempête de l'ouest-sud-ouest. Lorsque cette dépression se fut éloignée vers le nord, le temps resta pendant quelques jours assez beau, bien qu'il y eût du brouillard le matin. Une aire de hautes pressions s'étendait alors sur l'Europe Centrale. Le 22 Novembre, il souffla un vent fort du nord-est, par suite d'une dépression qui passait à l'est, le long des Pays-Bas; puis il y eut une répartition irrégulière de la pression atmosphérique sur l'Europe, pendant laquelle, le 23 Novembre, le temps dans notre pays fut sous l'influence d'une dépression au-dessus de l'Irlande. Cette dépression se dirigea vers l'ouest, et se maintint à l'entrée de la Manche jusqu'au 26, date à laquelle elle s'éloigna vers le Danemark. Elle fut suivie d'une seconde dépression, de sorte que les derniers jours du mois furent sombres et orageux. Le 30 Novembre, le temps fut assez beau.

Op den avond van 2 December woei een krachtige storm uit het WZW.; in verband met een depressie boven het Zuiden van Noorwegen. Deze werd door een tweede gevolgd, waarna het op 5 December fraai zacht weder werd. Boven Midden-Europa strekte zich toen een gebied van hooge drukking uit, doch dit was slechts van korten duur en een reeks depressies volgden elkander op, die, meest alle van Schotland naar Zweden trekkende, hier te lande guur, somber weder veroorzaakten. Ondertusschen had zich boven Frankrijk een ander gebied van hooge drukking ontwikkeld, hetwelk al meer en meer zijn invloed deed gelden en zich naar Ierland verplaatste. Een Noordelijke luchtstroom was hiervan het gevolg, waarbij de temperatuur daalde en op 21 December een korte periode van vorst met fraai weder intrad. Van Engeland verplaatste zich het gebied van hooge drukking naar Midden-Europa en verdween in Z.-Oostelijke richting. Een diepe depressie ten NW. van Schotland, maakte op 27 December aan dit winterweder een einde en veroorzaakte een storm uit het ZW., die op 29 December slechts voor enkele uren verflauwde, om 's avonds, tengevolge eener depressie, die van het Kanaal langs de kust trok, weder aan te wakkeren. Op 31 December was het weder vrij goed.

Le soir du 2 Décembre, il y eut une forte tempête de l'ouest-sud-ouest, en rapport avec une dépression sur le sud de la Norvège. Cette dépression fut suivie d'une seconde, après quoi le temps devint beau et doux le 5 Décembre. Une aire de hautes pressions s'étendait alors sur l'Europe Centrale, mais elle fut de peu de durée; une série de dépressions, se mouvant presque toutes de l'Ecosse vers la Suède, amenèrent dans notre pays un temps froid et sombre. Sur ces entrefaites, il s'était formé sur la France une autre aire de hautes pressions, qui fit sentir de plus en plus son influence, et se déplaça vers l'Irlande. Elle produisit un vent du nord, qui fit baisser la température, et amena, le 21 Décembre, une courte période de gel et de beau temps. Cette aire de hautes pressions se dirigea de l'Angleterre vers l'Europe Centrale, et disparut vers le sud-est. Une profonde dépression au nord-ouest de l'Ecosse mit fin, le 27 Décembre, à ce temps d'hiver, et amena une tempête du sud-ouest, qui ne diminua pendant quelques heures, le 29 Décembre, que pour recommencer le soir avec une nouvelle vigueur, à la suite d'une dépression qui passait de la Manche le long de nos côtes. Le 31 Décembre, le temps fut assez bon.

E. JAAROVERZICHT.

1898.

Voor de inrichting en verklaring der hiervolgende tabellen wordt verwezen naar de inleiding van het Jaarboek 1893.

Primo December 1898 is met het doen van vergelijkende waarnemingen te Utrecht opgehouden, omdat toen het aantal waarnemingen om het verschil in temperatuur tusschen Utrecht en de Bilt te kunnen nagaan, voldoende geacht werd.

Hoewel de waarnemingen te Utrecht zich niet over een geheel jaar uitstrekken en die van de Bilt wel, zijn toch hier nog de waarnemingen van de eerste plaats opgenomen om de geheele serie van 1 December 1848 af, dus van juist 50 jaar, compleet te maken.

De waarnemingen te de Bilt welke in het najaar van 1896 aangevangen zijn, zullen later volledig gepubliceerd worden.

Tabel **A.** Het jaar 1898 ving aan met te hooge temperaturen, welke de geheele maand Januari en ook nog voor een groot gedeelte van de maand Februari stand hielden, daarna daalde de temperatuur en bleef zij te laag tot Juli. Vooral in Januari was de temperatuur buitengewoon hoog. Het gemiddelde bedroeg meer dan in Februari, ja zelfs 0.66 graden meer dan in Maart. Deze laatste maand was dan ook ruim een graad te koud. Juli overtrof haar echter daarin nog, want deze maand was gemiddeld 2.41 graden te koud. Daarna viel de warmte weder in, zoodat Augustus gemiddeld 1.53 graden te warm was. Ook September en November waren te warm. In October was de temperatuur juist gelijk aan de normale.

De luchtdrukking was in Januari, in tegenstelling van hetgeen men kon verwachten met het oog op de hooge temperatuur van die maand, belangrijk te hoog. Gemiddeld over de maand 8.84 mM. Als regel geldt dat hooge barometerstanden in den winter gepaard gaan met lage, in den zomer met hooge temperaturen.

De hooge luchtdrukking gedurende Januari werd gevolgd door eene periode van lagen barometerstand, die vijf maanden achtereen aanhield. Eerst in Juli werden de afwijkingen weer positief en hielden tot September stand.

E. APERÇU ANNUEL.

Nous renvoyons à la préface de l'Annuaire de 1893 pour la distribution et l'explication des tables suivantes.

Le premier Décembre, on a cessé de faire des observations comparatives à Utrecht, pour connaître la différence de température entre Utrecht et le Bilt, parce qu'on jugeait le nombre d'observations suffisant.

Bien que les observations faites à Utrecht ne s'étendent pas sur toute l'année, et que ce soit bien le cas pour celles du Bilt, on donne pourtant ici les premières, afin de compléter la série à partir du 1er Décembre 1848, c'est-à-dire pour une période de 50 ans.

Les observations qui ont été commencées au Bilt dans l'automne de l'année 1896, seront publiées plus tard en entier.

Table **A.** L'année 1898 commença par une trop haute température, qui se maintint pendant tout le mois de Janvier et même pendant une grande partie du mois de Février; puis la température baissa, et resta trop basse jusqu'au mois de Juillet. En Janvier surtout la température fut extraordinairement haute. La moyenne fut même supérieure à celle de Février, oui même de 0°.66 supérieure à celle de Mars, mais ce dernier mois avait été de plus d'un degré trop froid. Le mois de Juillet fut aussi trop froid, car la moyenne resta de 2°.41 au-dessous de la normale. Puis la chaleur revint, de sorte que le mois d'Août fut en moyenne de 1°.53 trop chaud. Septembre et Novembre furent aussi trop chauds; en Octobre, la température fut justement égale à la normale.

La pression atmosphérique fut beaucoup trop haute en Janvier, en moyenne de 8.84 millim.; on ne pouvait guère s'y attendre, vu la haute température de ce mois, car, dans la règle, les hautes pressions atmosphériques sont accompagnées de basses températures en hiver, et de hautes températures en été.

La haute pression atmosphérique du mois de Janvier fut suivie d'une période de basses pressions, qui se maintinrent pendant cinq mois consécutifs. En Juillet seulement, les écarts redevinrent positifs, et se maintinrent jusqu'au mois de Septembre.

A. Gemiddelde waarden en afwijkingen van temperatuur en dampkringsdrukking te Utrecht in 1898.

Moyennes et écarts de la température et de la pression atmosphérique à Utrecht en 1898.

Tabel **B.** De onmiddellijk onder den invloed der zee staande plaatsen Helder en Vlissingen hebben overeenkomstig vorige jaren, de geringste sommen der temperatuur-afwijkingen.

Maastricht dat in den regel de grootste som heeft, wordt ditmaal door Groningen en Leeuwarden overtroffen.

Tabel **C.** De grootste schommelingen in de luchtdrukking komen als gewoonlijk weder in Helder voor, de kleinste in Maastricht.

De noordelijke plaatsen Helder, Leeuwarden en Groningen hebben alle geheel overeenkomstig den regel grooter sommen dan de zuidelijker gelegen stations, Vlissingen, Hellevoetsluis, Tilburg en Maastricht.

Delfzijl en Amsterdam wijken af van den regel, dat de noordelijke plaatsen in ons land, welke het dichtst gelegen zijn bij de banen, waarlangs de centra der depressies zich voortbewegen, grooter afwijkingen, voornamelijk in negatieven zin, van de normale vertoonen, dan de zuidelijke.

Table **B.** Les stations du Helder et de Flessingue, qui sont sous l'influence immédiate de la mer, présentent, comme les autres années, les sommes les plus faibles des écarts de température.

Maestricht, qui a d'ordinaire la plus grande somme, est cette fois surpassé par Groningue et Leeuwarde.

Table **C.** Les plus grandes oscillations dans la pression atmosphérique se présentent encore, comme d'ordinaire, au Helder; les plus petites, à Maestricht.

Les stations du nord, le Helder, Leeuwarde et Groningue, ont toutes, conformément à la règle, des sommes plus grandes que les stations du sud, Flessingue, Hellevoetsluis, Tilbourg et Maestricht.

Delfzyl et Amsterdam s'écartent de la règle, suivant laquelle les stations au nord de notre pays, qui se trouvent le plus près des routes suivies par le centre des dépressions, présentent, surtout en sens négatif, de plus grands écarts de la normale que les stations du sud.

B. Sommen van alle afwijkingen der temperatuur.

Sommes de tous les écarts de la température.

Tabel **D.** De hooge barometerstand in Januari, in tabel A uit de groote positieve afwijking voor die maand zichtbaar, laat zich in deze tabel meer gedetailleerd nagaan. Slechts vier dagen 6, 7, 9 en 31 Januari kwam een negatieve afwijking voor. Van 10 tot 30 Januari stond de barometer onafgebroken gemiddeld dagelijks bijna 13 mM. te hoog. Andere langdurige positieve afwijkingen kwamen in dit jaar niet voor. Alleen in Juni stond de barometer nog 13 dagen achtereen te hoog, maar de afwijking was gemiddeld slechts ongeveer 3 mM.

Ook lang aanhoudende negatieve afwijkingen kwamen niet voor. De langste, 13 dagen, is die van 23 Maart tot 4 April, met een gemiddelde afwijking van ruim 7 mM.

Tabel **E.** Slechts 3 dagen 8, 17 en 18 was het in Januari te koud. Van 19 Januari tot 5 Februari was de temperatuur onafgebroken te hoog, met de groote gemiddelde afwijking van ruim 4 graden Celsius. Van 28 December tot 7 Januari 1898 was deze nog grooter en bedroeg zij bijna 5 graden.

Van half Februari tot half Augustus waren de langaanhoudende temperatuur-afwijkingen bijna alle in negatieven zin, daarna veranderde het karakter van het weder en hadden de positieve afwijkingen de overhand.

C. Sommen van alle afwijkingen der luchtdrukking.

Sommes de tous les écarts de la pression atmosphérique.

Table **D.** Le haut niveau barométrique de Janvier, qui apparaî du grand écart positif pour ce mois dans la table A, peut être suiv d'une manière plus détaillée dans cette table-ci. Quatre jours seulement le 6, le 7, le 9 et le 31 Janvier, il y eut un écart négatif. Du 1(au 30 Janvier, le baromètre fut chaque jour sans interruption en moyenne de près de 13 millimètres trop haut. D'autres écarts positifs de longue durée ne se présentèrent pas dans cette année. En Juir seulement, le baromètre fut encore pendant 13 jours consécutifs trop haut, mais l'écart ne fut en moyenne que de 3 millimètres environ.

Il n'y eut pas non plus de longues périodes d'écarts négatifs. La plus longue dura 13 jours, du 23 Mars au 4 Avril, avec un écart moyen de plus de 7 millimètres.

Table **E.** Trois jours seulement en Janvier, le 8, le 17 et le 18, furent trop froids. Du 19 Janvier au 5 Février, la température fut continuellement trop haute, avec un écart moyen de plus de 4 degrés centigrades. Du 28 Décembre 1897 au 7 Janvier 1898, cet écart fut encore plus grand et de près de 5 degrés.

De la mi-Février à la mi-Août, les écarts consécutifs de température furent presque tous négatifs; le temps changea ensuite de caractère, et les écarts positifs eurent le dessus.

De langste afwijking in denzelfden zin, en wel in negatieven, duurde 23 dagen, van 22 Juni tot 15 Juli.

Langdurige positieve afwijkingen waren die van Januari, hierboven reeds vermeld en die van 21 October tot 9 November.

Le plus long écart dans le même sens fut négatif: il dura 23 jours, du 22 Juin au 15 Juillet.

Les longs écarts positifs furent ceux de Janvier, dont nous avons parlé plus haut, et ceux du 21 Octobre au 9 Novembre.

D. Datum, duur en bedrag der barometer-afwijkingen in den morgen te Utrecht onafgebroken in denzelfden zin op elkander volgende in 1898.

Date, durée et sommes des écarts de la pression atmosphérique du matin à Utrecht en 1898, qui ont eu consécutivement le même signe.

Tabel **F.** De eerste helft van het jaar was zeer nat. Alleen Januari maakte te Groningen daarop een uitzondering. Eerst met het rijzen der temperatuur in Juli neemt de regenhoeveelheid af. September was zoowel te Utrecht als te Groningen zeer droog. Tegen het einde van het jaar nam de regenval weer toe.

In het bijzonder moet nog vermeld worden de belangrijke regenhoeveelheid welke in Februari en Mei viel.

Te Groningen viel, voornamelijk ten gevolge van den drogen nazomer en herfst, over het geheele jaar minder regen dan mocht verwacht worden.

Table **F.** La première moitié de l'année fut très humide. A Groningu seulement, le mois de Janvier fait exception. La quantité de plui tombée ne diminua qu'avec l'augmentation de la température en Juillet Le mois de Septembre fut très sec à Utrecht aussi bien qu'à Groningue Vers la fin de l'année, la pluie recommença à tomber.

La grande quantité de pluie tombée en Février et en Mai, mérit d'être mentionnée.

A Groningue, il tomba pendant toute l'année moins de pluie qu'or ne pouvait s'y attendre, ce qui est dû surtout à la sécheresse de l fin de l'été et de celle de l'automne.

F. Regenhoeveelheden. — Eau tombée.

Tabel **H.** De verdamping was te Helder, in tegenstelling met vorige jaren, grooter dan te Utrecht. De reden hiervan is misschien dan te Helder in Januari 1898 een nieuwe verdampingsmeter in gebruik is genomen.

Table **H.** Contrairement aux autres années, l'évaporation fut plus grande au Helder qu'à Utrecht. Cela est dû peut-être à la mise en service d'un nouveau vaporimètre au Helder, en Janvier 1898.

H. Verdamping. — Évaporation. 1898.

Van de 25 maal, dat een ongunstig verschil of een serie van ongunstige verschillen voorkwam, wakkerde de wind 10 maal tot storm aan. De overige malen werd men noodeloos voor storm gewaarschuwd. Slechts eenmaal, 4 Mei, stormde het zonder dat men vooraf door het barometer-afwijkingsverschil gewaarschuwd was. Hierbij valt echter op te merken, dat het verschil toch bijna 4 mM. was en tusschen de plaatsen Maastricht en Vlissingen, die relatief dicht bij elkander gelegen zijn, zoodat het gradient daartusschen vrij groot was. Stellig zoo groot, dat het, in de richting Helder—Maastricht gelegen zijnde, deze plaatsen zeker een verschil van meer dan vier mM. zouden opgeleverd hebben.

Sur 25 fois qu'il se présenta un gradient défavorable, ou une séri de gradients défavorables, le vent tourna 10 fois à la tempête, de sort que les autres fois on fut inutilement alarmé. Une fois seulement, l 4 Mai, la tempête arriva sans qu'on eût été averti d'avance par un différence barométrique. Nous faisons cependant remarquer que l différence était pourtant de près de 4 millimètres entre les stations d Maestricht et de Flessingue, qui sont relativement assez près l'une d l'autre, de sorte que le gradient entre ces deux endroits était asse grand, si grand même, que, s'il se fut trouvé dans la direction Helder— Maestricht, ces stations auraient présenté certainement une différenc de plus de quatre millimètres.

Datums, waarop een ongunstig verschil in de barometer-waarnemingen of een storm van dertig of meer kilogrammen op den vierkanten meter voorkwam.

Dates avec un gradient défavorable ou une tempête de trente kilogrammes ou plus par mètre carré.

Tabel **M.** Te de Bilt zoowel als te Vlissingen is, naarmate de hemel helderder is, de dagelijksche stijging der temperatuur grooter. Vooral te de Bilt, meer dan Vlissingen onttrokken aan den invloed der zee, is dit, voornamelijk in de zomermaanden, zeer merkbaar.

In Juni bijv. stijgt de temperatuur te de Bilt in den loop van den dag bij betrokken of zwaar bewolkten hemel gemiddeld 6.9 graden, bij helderen of licht bewolkten hemel 12.3 graden. Een verschil dus van 5.4 graden. In Vlissingen is dit verschil slechts 0.1 graad.

Table **M.** Au Bilt aussi bien qu'à Flessingue, l'accroissement diurne de la température est d'autant plus grand que le ciel est plus serein. Au Bilt surtout, qui est moins exposé à l'influence de la mer que Flessingue, cela se fait sentir, surtout dans les mois d'été.

En Juin, par exemple, la température au Bilt s'élève dans le cours de la journée de 6.9 degrés en moyenne, par un ciel couvert ou fortement nuageux, et de 12.3 degrés par un ciel serein ou légèrement nébuleux; ce qui fait une différence de 5.4 degrés. A Flessingue, cette différence n'est que de 0°.1.

M. Grootte van den dagelijkschen gang der temperatuur naar de helderheid.

MAGNETISCHE WAARNEMINGEN.

OBSERVATIONS MAGNÉTIQUES.

Aardmagnetische Waarnemingen.

In den loop van het jaar 1898 werden de magnetische instrumenten geleidelijk van Utrecht naar de Bilt overgebracht. Tot 31 December heeft het photografisch registreer-instrument in den kelder van het Observatorium te Utrecht, voor de declinatie en voor de horizontale intensiteit gewerkt, en aan deze photogrammen zijn de hierachter volgende uurwaarnemingen ontleend, maar de absolute bepalingen zijn deels te Utrecht, deels te de Bilt verricht.

Vóór zijn vertrek naar Batavia heeft Dr. W. VAN BEMMELEN het verschil in declinatie tusschen Utrecht en de Bilt bepaald en daarvoor 1′30″ gevonden, wat met de waarde uit de isogonenkaart voor 1885 van NEUMAYER afgeleid, overeenkomt. Voor het verschil in de horizontale intensiteit van Utrecht en van de Bilt vond hij 0.00007.

Observations sur le magnétisme terrestre.

Les instruments magnétiques ont été transportés peu à peu d'Utrecht au Bilt dans le courant de l'année 1898. L'instrument enregistreur-photographique pour la déclinaison et l'intensité horizontale, qui se trouvait dans la cave de l'Observatoire à Utrecht, y a marché jusqu'au 31 Décembre. C'est à ses photogrammes qu'ont été empruntées les observations horaires suivantes, mais les déterminations absolues ont été faites en partie à Utrecht et en partie au Bilt.

Avant son départ pour Batavia, M. le Dr. VAN BEMMELEN a déterminé la différence de déclinaison entre Utrecht et le Bilt et a trouvé pour cela 1′30″, ce qui est d'accord avec la valeur déduite de la carte des isogones pour 1885 de NEUMAYER. Il avait aussi trouvé que la différence entre l'intensité horizontale d'Utrecht et du Bilt était de 0.00007.
